# Clínica Pedrosa

## Started cicles

| Cycles for fresh fertilization | Cycles with cryopreserved embryos |
|---|---|
| < 100 | < 100 |
| *Number of cycles in which the patient receives medication for ovarian stimulation, or ultrasound monitoring in the case of natural or replacement cycles.* | |

## Results grouped by age of the woman

| | The probability of pregnancy by embryo transfer in fresh | The probability of pregnancy by cryopreserved embryo transfer |
|---|---|---|
| **Under 35 years** | Does not apply | 0 - 86.7 |
| **35 to 39 years** | 0 - 35.4 | Does not apply |
| **Over 40 years** | 0 - 26.1 | 0 - 44.8 |
| *The comparison of results between different clinics could be misleading due to differences in types of patient and treatment. Most clinics perform around the national average.* | | |

## Embryo implantation rate

| Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|
| 0 - 14.2 | 0 - 20.7 |
| *The probability of transfered embryo to nest in the matrix* | |

## Percentage of embryos transferred

| Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|
|  |  |

*The Fertility Spanish Society recommend to transfer one or two embryos, when it's possible.*

*If you pass the mouse over the pie chart a label with the data is shown*

## Gestation types of transfers of embryos in fresh

| | Transfering a single embryo | Transfering 2 embryos | Transfering 3 embryos |
|---|---|---|---|
| **Single gestations** | 100% | 100% | Does not apply |
| **Twins gestations** | 0% | 0% | Does not apply |
| **Triple or greater gestations** | 0% | 0% | Does not apply |
| *A single pregnancy is the best outcome of fertility treatments.* | | | |

## Gestation types of transfers of embryos cryopreserved

| | Transfering a single embryo | Transfering 2 embryos | Transfering 3 embryos |
|---|---|---|---|
| **Single gestations** | 100% | 100% | Does not apply |
| **Twins gestations** | 0% | 0% | Does not apply |

## Clínica Pedrosa

### Donated oocytes reception cycles

| Cycles for fresh fertilization | Cycles with cryopreserved embryos |
|---|---|
| < 100 | < 100 |
| *In vitro fertilizartion cycles where the oocytes are provided by a donor.* | |

### Results grouped by age of the receiving woman

| | The probability of pregnancy by embryo transfer in fresh | The probability of pregnancy by cryopreserved embryo transfer |
|---|---|---|
| **Under 35 years** | 0 - 100 | 13.3 - 100 |
| **35 to 39 years** | 0 - 82.9 | Does not apply |
| **Over 40 years** | 28.9 - 100 | 19.4 - 68.1 |
| *The comparison of results between different clinics could be misleading due to differences in types of patient and treatment. Most clinics perform around the national average.* | | |

### Embryo implantation rate

| Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|
| 17.2 - 54.8 | 10.5 - 38.1 |
| *The probability of transfered embryo to nest in the matrix* | |

### Percentage of embryos transferred

| Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|
|  |  |
| *The Fertility Spanish Society recommend to transfer one or two embryos, when it's possible.* | |
| *If you pass the mouse over the pie chart a label with the data is shown* | |

### Gestation types of transfers of embryos in fresh

| | Transfering a single embryo | Transfering 2 embryos | Transfering 3 embryos |
|---|---|---|---|
| **Single gestations** | Does not apply | 71.4% | Does not apply |
| **Twins gestations** | Does not apply | 28.6% | Does not apply |
| **Triple or greater gestations** | Does not apply | 0% | Does not apply |
| *A single pregnancy is the best outcome of fertility treatments.* | | | |

### Gestation types of transfers of embryos cryopreserved

| | Transfering a single embryo | Transfering 2 embryos | Transfering 3 embryos |
|---|---|---|---|
| **Single gestations** | 100% | 100% | Does not apply |
| **Twins gestations** | 0% | 0% | Does not apply |
| **Triple or greater gestations** | 0% | 0% | Does not apply |

## Clínica Pedrosa

### IUI cycles in women under 40 years

| | Women under 35 years | Women between 35-39 years |
|---|---|---|
| **Pregnancy rate per cycle ranges between** | 0 - 28.6 | 0 - 32.6 |
| *In intrauterine insemination, the sperm provided by the male partner is placed in the patient´s uterus* | | |

### Type of pregnancies in IUI

| Women under 35 years | Women between 35-39 years |
|---|---|
|   |   |
| *A single pregnancy is the best outcome of fertility treatments.* | |
| *If you pass the mouse over the pie chart a label with the data is shown* | |

### DI cycles in women under 40 years

| | Women under 35 years | Women between 35-39 years |
|---|---|---|
| **Pregnancy rate per cycle ranges between** | Does not apply | 0 - 86.7 |
| *In donor insemination, donated sperm is placed in the patient´s uterus.* | | |

### Type of pregnancies in DI

| Women under 35 years | Women between 35-39 years |
|---|---|
| Does not apply |   |
| *A single pregnancy is the best outcome of fertility treatments.* | |
| *If you pass the mouse over the pie chart a label with the data is shown* | |

## Clínica Pedrosa

### Preimplantational genetic diagnosis

| | Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|---|
| The probability of pregnancy by transfer ranges between | **Does not apply** | **0 - 100** |
| *Preimplantational genetic diagnosis: In vitro fertilization treatment performed with embryos that have been subject to genetic analysis.* | | |

### Devitrified own egg cycles

| | Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|---|
| The probability of pregnancy by transfer ranges between | **Does not apply** | **Does not apply** |
| *Frozen egg cycles: In vitro fertilization treatment performed with frozen eggs. In a second stage, the eggs are defrost and fertilized.* | | |

### Devitrified Egg donor

| | Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|---|
| The probability of pregnancy by transfer ranges between | **Does not apply** | **0 - 67.4** |
| *Frozen egg cycles: In vitro fertilization treatment performed with frozen eggs. In a second stage, the eggs are defrost and fertilized.* | | |

### Embryos donation

| | Transfers of cryopreserved embryos |
|---|---|
| The probability of pregnancy by transfer ranges between | **Does not apply** |
| *Embryos donation: The donated embryos are provided by couples subjected to In vitro fertilization.* | |

### Sperm donation

| | Transfers of embryos in fresh | Transfers of cryopreserved embryos |
|---|---|---|
| Pregnancy probability by embryo transfer ranges between | **Does not apply** | **0 - 86.7** |
| *Sperm donation: In vitro fertilization treatments where the used sperm is provided by donors.* | | |
